## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0,194,634. EP teaches a plasma arc torch nozzle 18 which has a thin coating of a nitride on nozzle portions, as claimed to reduce erosion of the nozzle. It is obvious that the nitriding process to coat the nozzle, copper, are micro particles which are embedded in the copper, since nitriding is a process which injects particles into the substrate. Use of a particular particle size as set forth in the dependent claims is considered a choice well within the skill level of the artisan, dependent on undisclosed parameters such as power levels and gases used in the torch operation. As per claim 12 the nozzle is

copper. AS per claim 15 is also an obvious choice to clean the nozzle and shape it to the desired shape, such steps conventional in the machining art of metal coating.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Augeraud et al, Marantz et al and Yoshimitsu et al are cited for teaching coating of plasma torch components with protective layers such as oxides and dielectrics, to enhance the erosion prevention of such components.
